# ION CHROMATOGRAPHY

Ion chromatography is an analytical separation method used in chemistry and biology. This chromatographic process is used to separate ions according to their charge. Using a liquid mobile phase, the charged analytes are passed through a stationary phase (polymer- or silicabased) modified with oppositely charged functional groups. Depending on their charge number, ion size and some non-specific interactions with the stationary phase, the ions are retarded at different rates.

Depending on the analyte physical properties, these can then be detected and quantified by conductivity measurement, UV absorption or radiation measurement.

Extended Water Application (Anions)

Sea Water (Anions)

Rain Water (Anions)

Urine (Anions)

## IC Applications

The fields of application of ion chromatography are manifold. One of the most important areas of application is certainly the investigation of aqueous systems such as drinking water and wastewater. It is above all fertilizers from agriculture that pollute the waters with high levels of nitrates. But also, the determination of organic acids in foods such as in wine and fruit juices or the quantification of trace elements such as iron in dietary supplements is possible.

- Parameters
  - Anions
  - Cations
  - Organic acids
  - Transition metals
  - Amines
- Typical Applications
  - Drinking water
  - Tap water
  - Sea water
  - Waste water
  - Rain water
  - Ultra-trace determination in electronic and power plants
  - Quality control and analysis of impurities
  - Elemental analysis (Wickbold & Schoeningger)
  - Pharmaceuticals
  - Urine analysis

Water analysis for water treatment plants

Cooling water control for power plants

Ground water analysis for quality control

# ION CHROMATOGRAPHY SYSTEM S 150

## Complete Family of IC Systems

The *Ion Chromatography System S 150* is a family of modular systems which can be customized to any application needs for the determination of a multitude of ions.

### S 1130 Pump System

The *Sykam S 1130 HPLC Pump System* is a very flexible and powerful HPLC solvent delivery system.

The possible configurations include an Isocratic or Quaternary Gradient Pump.

### S 5300 Sample Injector

The *Sykam S 5300 Sample Injector System* is a reliable and accurate HPLC autosampler with excellent reproducibility and linearity properties. Variable vial racks and adaptors for microtiter plates as well as a multitude of options make this system highly adaptable and suitable for any analytical application.

# SYKAM AUTO-SUPPRESSOR

The **Sykam Auto-Suppressor** is a robust chemical suppression system to increase the sensitivity of the anion analysis by reducing the background conductivity of the eluent.

## Trouble-Free Operation

The **Sykam Auto-Suppressor's** membrane is protected by a **Pressure Safety Valve**, which opens when the pressure of the eluent flow is becoming too high. No annoying and expensive exchange of the membrane is needed!

The membrane pump is maintenance free in its

operation and the proper function is monitored by a built-in pressure sensor.

The closed suppression circuit provides continuous operation over a long time without the need of regeneration solutions. The capacity of the **Ion Exchange Buffer Chamber** can be increased with an **ENDURANCE** upgrade.

When the chamber's capacity is reached it can be easily regenerated without effort and need not to be replaced.

## Working Principle

Conductivity detection of anions in ion chromatography requires reduction of background conductivity to increase the detection sensitivity.

The eluent buffer (e.g.  $\text{Na}_2\text{CO}_3 / \text{NaHCO}_3$ ) used to perform anion chromatography disturbs the analyte measurement (e.g. chloride, nitrate, sulfate).

The *Sykam Auto-Suppressor* substitutes counter cations of the eluent (e.g.  $\text{Na}^+$ ) with hydrogen ions. This transfers the eluent anion (e.g.  $\text{CO}_3^{2-}$ ) in a low conductive form and reduces the background conductivity.

The analyte anions will not be interfered by this process. Their hydrogen forms (e.g. hydrochloric acid) are still dissociated.

The *Sykam Auto-Suppressor* combines:

- an ion exchange buffer chamber, filled with a durable and customer regenerative cation exchanger
- a transfer solution to transport hydrogen cations to the mobile phase and buffer cations to the resin
- and a membrane capillary that allows the transfer of hydrogen- and eluent cations

# COMPACT ANION IC SYSTEM S 155-A/C

The *Compact Ion Chromatograph S 155* is a economic solution for low sample throughput.

The **S 155** is an all-in-one IC system with integrated anion auto-suppressor, column oven and 1-channel conductivity detector.

It can be upgraded with an online vacuum de-gasser, eluent selection valve or inert gas supply regulator.
